In October 2019, AutoCAD made headlines when the company released a commercial update to the application that shipped with a permanent exe virus. The spread of the malware earned headlines in the press, including, "How A 17-Year-Old Became The Computer Worm Of The Year" by The New York Times. AutoCAD was also removed from Apple's Mac App Store after the release of the update. [1][2][3][4][5][6][7] AutoCAD History [ edit ] Development [ edit ] AutoCAD was initially a desktop product for Macintoshes running on a personal computer and is the only CAD program that is available on this platform. The earliest versions of the software were developed in 1979 by Jim Difede, the company's first employee, and were known as CADD-Mac, or Computer-aided Design for Macintosh. Difede was hired by George Mason University to develop a CAD program for a mainframe-based computer operating system. [8][9][10][11][12] The initial release of AutoCAD was in December 1982. The new CAD program was designed to meet the needs of the Department of Defense's Aviation Material Command. It was developed with the assistance of an in-house development team, which included Difede and an advertising executive. [13][14][15] The first commercial release of AutoCAD was limited to Macintoshes. [16] AutoCAD 2, released in January 1983, featured a single frame and up to six drawing units, such as columns, walls, or roofs. In May of that year, AutoCAD 2 was expanded to allow multi-frame sheets and more drawing units. AutoCAD 2 was also available on Apple IIs as of this time. [17][18] AutoCAD 2 was released to the public in December 1983. By this time, Difede and his development team had expanded to 18 people. [19] The team began to work on an update to AutoCAD 2, which was released to the public in July 1984 as AutoCAD 2.5. [20][21][22][23][24] AutoCAD 2.5 was the first version of AutoCAD to include Windows compatibility. Difede decided that for the new version to be successful, they needed to market it to all computer users. AutoCAD

Q: How do I make a counter that keeps incrementing on a button click? I have an element, with an ID, that I would like to increment by one each time the user clicks the button. When the page first loads, the counter should be set to 0. Then I would like it to increment each time the user clicks the button. 0 var counter = 0; function myElement() { counter++; document.getElementById('myElement').innerHTML = counter; } A: The function should be called when the user clicks on the button. This function should update the value of the myElement and should be placed inside the onclick attribute. This way it will be executed every time the user clicks the button. 0 var counter = 0; function myElement() { counter++; document.getElementById('myElement').innerHTML = counter; } The invention concerns a magnetic resonator of the type comprising a magnetic core, two coils mounted in the magnetic core, a diaphragm for the movable mounting of at least one of the coils in the magnetic core, a fixed support on the magnetic core, the movable coil being coupled to the diaphragm and an armature which may be electromagnetically attracted by the movable coil. Such resonators are employed in, for example, velocity sensors or acceleration sensors. Resonators of this type are described, for example, in the U.S. Pat
