For example, look at this method in JLabel: public java.lang.String getText() { return getClass().getName(); } What is the difference between using getClass().getName() and getClass().getName()? A: getClass().getName() returns the name of the current object. The class name can be used to identify an object of a class. This method can be useful in debugging code, when trying to find out what class an object is. getClass().getName() can also be used to find out the name of the class. getClass().getName() method returns the name of the current class. It can be used in other ways, but it is less useful for debugging purposes than the first method. In your example there is no difference. The only difference is that if you want to use getClass().getName() you have to instantiate the object first. Example: System.out.println(new JLabel().getClass().getName()); // returns "javax.swing.JLabel" System.out.println(new J

KeyMacro allows the user to record macros from the keyboard. After the recording process is done, the macro can be added to a special shortcut so that the user can apply the desired operation to selected files at the click of a button. What is KeyMacro? KeyMacro allows users to record keyboard shortcuts, which can later be executed on selected files. The application integrates with Windows and works with every text editor and application on a workstation. This utility has been designed specifically for those who work with a text editor or simply need a shortcut to copy files and folders. In addition, KeyMacro is a reliable application with advanced tools such as recording a macro on the fly, recording audio macros and an easy to understand User Interface. KeyMacro is a highly flexible software. It can record and save almost any action on a workstation. The only limitation is the length of the recording time, which can reach up to 3 minutes. KeyMacro can be used on any Windows operating system as well as on Linux/Unix platforms. It works with any text editor and offers a friendly User Interface. KeyMacro works without a graphic environment such as Microsoft Windows or Mac OS X. Instead, the application integrates with Windows and provides a text-based interface that can be easily used by any user with a text editor. KeyMacro works well with any applications that use a text editor and has a built-in timer. The application works well with Mac OS X and Linux operating systems. KeyMacro allows users to record macros from the keyboard, without a graphic environment. This is the reason why it works with any operating system, regardless of the operating system used by the text editor or application where the macro must be used. KeyMacro also allows users to record audio macros, which makes it possible to combine the two methods of recording macros. The program is compatible with Windows, Linux and Mac OS X operating systems and works with all text editors, including the TextMate editor. KeyMacro includes an easy-to-use User Interface, which is based on a simple and intuitive layout. Users can easily locate the Macro Manager window and can easily choose between video and audio recording mode. KeyMacro allows users to easily add custom actions to the recording of the selected file. It also has an inbuilt user help feature, which provides an array of detailed explanations on what the function is all about. KeyMacro is a trustworthy and reliable software that will become the tool 1d6a3396d6
