Chronic granulomatous disease (CGD) is a congenital disorder of the phagocyte system in which neutrophils are unusually susceptible to both death after phagocytosis and defective killing of ingested microorganisms. Clinically this disorder is usually manifested by recurrent and often chronic infections of mucous membranes and skin, such as chronic mucocutaneous candidiasis, and by tissue abscesses that are difficult to eradicate. As a result of the impaired ability of CGD patients to effectively kill ingested bacteria, the therapy of choice for these patients has evolved to include granulocyte transfusions rather than the more traditional antifungal and antibiotic regimens. Despite these advances, in some CGD patients life expectancy is still severely limited.FONT SHARE THIS MORE STORIES Graffiti on Pt. Henry Bridge caught the attention of sheriff's deputies Deputies say they arrested the two young men who left graffiti on the bridge while cops were trying to clean it up.
