Event Manager Crack+ Keygen Full Version Free Download

What's New In?

Event Manager is the most flexible event manager application available. Besides the standard reminder and repeating events it can also be used for birthdays, holidays and other occasions. Unlike others, it can schedule events in intervals as short as one minute or as long as a year. You can work with multiple calendars and organize your dates in various ways. Every date is provided with color coding according to its level of importance (orange: normal, yellow: reminder, red: important, white: urgent). You can set different reminders, from beep to pop up window. The latter can show a full dialog with detailed information about the event. It can be closed by tapping the event or simply by swiping it away. You can even play a sound file or take a photo of the event you want to mark on your calendar. You can use keywords for events, if you want to find them later. You can import data from other Event Manager applications (Base, Max) and also from Outlook. Using the included data files you can import your birthday list, holidays list, calendar list, contacts list and more. All data is easily accessible by categories and subcategories. Features: * import data from Base, Max, Outlook and many others * import data from the included data files * re-arrange existing events or drag and drop them to a new position * create new events and add notes * view all your events in a calendar * change the color of events * change the color of categories * have separate calendars for holidays, birthdays, etc. * set specific events as exceptions * set a reminder and have it displayed on the calendar or pop up * import data from Outlook calendar * export data to an HTML file * export data to text and CSV files * import contacts from your contacts list * import contacts from a CSV or text file * import contacts from your calendar * import from the entire list or from subcategories * import from Outlook * import from iCalendar * import from CSV * import from text file * import from Contacts * import from the entire list or from subcategories * import from Outlook * import from iCalendar * import from CSV * import from text file * import from Contacts * import from the entire list or from subcategories * import from Outlook * import from iCalendar * import from CSV * import from text file * import from Contacts * import from the entire list or from subcategories * import from Outlook * import from iCalendar * import from CSV * import from text file * import from Contacts *

System Requirements:
