Although considered a desktop application, AutoCAD can also be used as a component of other larger CAD applications including DGN file format (DDN), STEP (STP), CPG and other file formats. The last version of AutoCAD, released in May 2017, introduced a cloud-based design suite called AutoCAD 360. What is AutoCAD? If you design with a pen and paper or on a whiteboard, you're using a piece of paper as your workbench, but when you're in AutoCAD, you're working on your computer. Many people (including the author) used to sketch out a drawing with a pencil and paper before they moved to the computer. Most of the time, this was a process that involved the back and forth of drawing, redrawing, erasing, and re-drawing – a process that often led to errors and frustration. If you're a seasoned CAD engineer, you can appreciate the amount of time it takes to build a CAD model from start to finish. The old "paper model" may have only taken you a few hours to build, but you can spend days building a model in AutoCAD. The AutoCAD and Microstation product line has evolved through eight different product generations starting in 1982. Today, AutoCAD is available for Windows, macOS and Linux operating systems, and the latest version is AutoCAD 2019. You may be wondering what makes AutoCAD different from other CAD products. 1. Accurately Draws Everything One of the first things you'll notice when you open AutoCAD is the broad blue line representing the paper. If you want to turn off this line, you can do so in the View tab of the Preferences dialog box. You may also want to do this if you're viewing your work in a screen-sharing tool such as Skype, and the line can disrupt the flow of the conversation. If you want to show a model in the center of the workspace, you need to put it on the paper. This could be an expensive problem if you're working on a large paper or an expensive sheet of paper. AutoCAD is able to automatically detect the edges of the paper, and the edges of the frame when it's been placed on a transparent background. Any errors will be shown on the paper, and you can then fix them as necessary. This eliminates the cost of paper, frames, white
