It is well known that certain medical conditions (e.g., heart disease, diabetes, high blood pressure) require a physician to monitor various parameters within a patient's blood and/or heart. Although these conditions often require continuous monitoring, they also often require monitoring only periodically, i.e., when the patient undergoes particular medical procedures. For example, a patient suffering from congestive heart failure ("CHF") may be required to monitor his or her blood pressure and other physiological parameters within his or her blood and/
