Photoshop has just introduced a few major updates for iPhone users, but the best part of them are the few new features for Android users. The update includes the ability to transfer compatible iPad Pro screenshots to your Android device, and it's compatible with working with PSD files. With version 14, you can now annotate your photos right inside Photoshop too. For instance, you can apply the same brush setting to a series of photos, or you can highlight an area of your image and convert it into a soft clip mask. Portfolio's one-stop copying and renaming tool is much improved over the original version you may have used on a Mac. Create higher resolution copies of all or selected individual layers, and make naming changes instantly. The iPhone X's notch is a rage amongst users, but it isn't an entirely new problem. In fact, while the iPhone X is the first iPhone to ship with a notch, it's not the first to have the problem. Since the late 1990s, as a way of "packing more into a phone," Apple has found a way to tuck the front-facing camera into the top of devices.
