Resonator is an additive synth plugin that focuses on sound waves and harmonics. The resonator synthesises sound waves with different pitches, frequencies and amplitudes. Each sound wave is created by a combination of a fundamental frequency and a resonance depth, both at different frequencies and with different amplitudes. The sound waves are then combined by the plugin into a special resonance envelope. The result is that you can have a number of resonator waves at different frequencies and amplitudes, and you can control the resonance depth with a modulator. Release Notes: 1.0.0 - New UI, new features, and new functionality 1.0.1 - Bug fixes - New presets - Soundcloud and Mixcloud integration Description Resonator is an audio plugin that you can use to add resonance and morph effects to your tracks and mixes, helping you to create clear sounds. The plugin can be used with any music genre and also comes with a LFO modulator that will enable you to enhance your music. This is a T-Dub Tracker with a lo-fi drum machine, it has 4 separate sounds in total. Each sound has a different combination of drums, sounds, and also a filter type. The combination of these sounds makes this track really unique. As this tracker uses the same settings for each sound, this makes it easy to get familiar with each sound. Most of the sounds are based on the middle of a drum loop, but there is also a short breakdown and a hand clap in there. Release Notes: 0.1.2 - Interface/UI changes 0.1.1 - Bug fixes - Updates to sounds, samples and new presets.
