keystrokes record mouse events record clipboard text record multi-byte text save recorded information into text files print reports record multiple input events at once dump clipboard contents create script from recorded keystrokes Macros are special sequences of keystrokes, mouse clicks, or other sequences that are played back at a later time. They allow the user to automate a process or sequence of operations without having to continually hit the keys or move the mouse. It uses a capture technique to record any keyboard or mouse event that is sent to the operating system. The result of a recording will be a copy of the event with timing information. Using the information from the event records, Macros can replay events at any time or at intervals. It is a freeware application that you can use to record and replay anything that you type into your computer. No installation is needed to record keystrokes, mouse clicks and clipboard contents. Free Key Macro Recorder is a multi-threaded software that keeps capturing all the input actions simultaneously and does not produce a batch of log files during recording. Free Key Macro Recorder is a fast software that records every type of input action sent to the computer. It records the exact timing of each input action. Free Key Macro Recorder records the keyboard shortcut keys, copy and paste text, mouse clicks and mouse movements. It can also record screen contents and clipboard contents. While each action is captured in a separate log file, it does not cause any extra files to be created. The whole process is completed in a matter of seconds and no extra time is required. Business analysts need a powerful, effective, and straightforward method to track complex tasks. Flying Logic Professional offers a graphical workflow tool to tackle this issue. Description: Flying Logic® Business Analysis is a comprehensive task planning suite that allows users to track activities on a logical, step-by-step manner. The utility can generate detailed graphs composed of numerous sets of vertices linked by connectors. A powerful application with an interface to match This resource can be handy for anyone that requires breaking down a complex task into a set of small, incremental steps. Dissecting an issue in this manner can reveal several unforeseen paths, which makes it a very good exploratory tool. The program comes with a somewhat complex and full GUI. There are numerous functions to explore and all the three standard interface objects are present (menus, tabs and buttons). Newcomers might have a difficult time adjusting to so many choices, but in the long run they will appreciate the power and flexibility that comes with such a setup. Generates PDF files Flying Logic Professional allows users to create diagrams from scratch, or to import charts from CSVs and scripts. The utility generates a program-specific XLOGIC file, but export options include far less exotic formats, such as PDF, JPEG, PNG or XML. Users can generate comprehensive charts via a wide range of built-in tools. Basic shapes account for task steps and multiple "Entities" (shapes) can be grouped together. Connectors can then be employed to link similar items together and convey the idea of correlation. Features multiple graphical objects that can be employed in the analysis Detailed descriptions can be added at each step and custom colors can be attached to each item. This is a great method of visually signaling group compatibility. Intermediary objects can also be defined, which is a great method of adding short notes. To sum up, Flying Logic Professional is a noteworthy tool for creating intuitive and informative diagrams for complex problems.
