It also works with camera zoom level changes and saves users from storing lots of unwanted creation of noise edges. It is both Zoom and quality control. Automatic Cropping – This feature involves the cropping of images in a more interactive fashion. It allows to crop and crop without specifying a precise polygon using an image mask. Some of the features include automatic and interactive cropping. Users can also choose to share cropped image for preview and comments. Adobe tells the new key features of Photoshop CC in a detailed blog. For instance, the new feature of Selection and Replace in Browser, while dealing in a wide range of file formats, can lose the original image as a reason to such editing. And this becomes even more important when the users import, save, or for new system-specific file components. In addition, this changes the original image and format. On the other hand, the improved version of Photoshop CC called Share For Review allows the users to edit designs and sketches when working remotely, with some new features under the hood. The new feature supports collaborative workflow. It enables users to stop working on the same file on a remote team. They can also see the change on other users in real time. And for further collaboration, the users can also drag the file to a new location and have other users open it effortlessly.
