An interesting change in the latest version of Photoshop is how you share things like artwork. In the old days, you'd add a page or a section to your website, insert a link, and that was it. Now, you can staple a single PSD or PDF file and add it as a link that folks can click on to view online. Sharing links is a plus, but there's also the option to send directly to your phone, and you can rename and message the link to anyone you want.

A new feature called Share in Review lets other people edit any Illustrator or Photoshop vector file you send to them. To use it, you select a folder with the files you want to share, and go to the Share Files dialog.

You can also use Share for Review to share a PSD file. Just go to the Share Files dialog, select your PSD, and go to Share.

Adobe Express for Design is actually the replacement for PS Touch, a feature that allowed editing files that were in the cloud, which you could then push out for use by others. Express for Design is used for editing files on a consumer-level device—hence the right-click menu saving feature. It's also used for sharing changed files—changes are saved automatically and push up to the cloud. You can also make changes in Sketch, Illustrator, and InDesign, and those changes are available instantly. When a note or comment is resolved, first reviewers that responded with a “helpful” or “neutral” response will be notified, and then the publisher. In addition, the reviewer who has the highest score will be notified and can reply to any comment with a “helpful” or “neutral” response.
